Starting and staying on track with JEVTANA

JEVTANA is a prescription anti-cancer medicine used with the steroid medicine prednisone. JEVTANA is used to treat men with castration-resistant prostate cancer (prostate cancer that is resistant to medical or surgical treatments that lower testosterone) that has worsened (progressed) after treatment with other medicines, including docetaxel.

IMPORTANT SAFETY INFORMATION

JEVTANA may cause serious side effects, including:

Low white blood cells, which can cause you to get serious infections, and may lead to death. Men who are 65 years or older may be more likely to have these problems.

Your healthcare provider (HCP):

• will do blood tests regularly to check your white blood cell counts during your treatment with JEVTANA.
• may lower your dose of JEVTANA, change how often you receive it, or stop JEVTANA until your HCP decides that you have enough white blood cells.
• may prescribe a medicine for you called G-CSF, to help prevent complications if your white blood cell count is too low.

Please see additional Important Safety Information throughout, and full Prescribing Information/Patient Information, including Serious Side Effects.
Starting JEVTANA

Now that you and your healthcare provider have decided that JEVTANA is right for you, find some useful information contained in this guide as you start treatment.

IMPORTANT SAFETY INFORMATION

Tell your HCP right away if you have any of these symptoms of infection during treatment with JEVTANA: fever (take your temperature often during treatment with JEVTANA), cough, burning during urination, or muscle aches.

Also, tell your HCP if you have any diarrhea during the time that your white blood cell count is low. Your HCP may prescribe treatment for you as needed.

CareASSIST

Patient Support by Sanofi Genzyme

The CareASSIST Patient Support Program by Sanofi Genzyme is dedicated to helping eligible patients with access and support for their JEVTANA treatment.

The CareASSIST Patient Support Program can help with:

- Access and Reimbursement: CareASSIST can help determine insurance coverage and options.
- Financial Assistance: Eligible patients may qualify to receive JEVTANA at no cost.
- Resource Support: CareASSIST can identify other resources and support that may be available.

For more information, call 1-833-WE+CARE (1-833-930-2273), Mon-Fri, 9am-8pm Eastern Time to speak with a CareASSIST Patient Access Specialist.

Or visit www.sanoficareassist.com
Talk with your healthcare team

Asking questions is a great way to know what to expect with JEVTANA treatment. Here are some suggested topics to discuss with your healthcare team so you are off on a good start.

Topics to discuss with your healthcare team

- What will my treatment schedule with JEVTANA look like and are there any other medications I need to take?
- How many infusions should I expect and what will be our treatment goal?
- How will I know if JEVTANA is working and is there any specific monitoring that I should consider and plan for?
- How should I expect to feel during and after my infusion?
- What are the most common side effects I should look out for and how can you and your team help address these issues if they occur?

IMPORTANT SAFETY INFORMATION

Severe allergic reactions can happen within a few minutes after your infusion of JEVTANA starts, especially during the first and second infusions. Your HCP should prescribe medicines before each infusion to help prevent severe allergic reactions.

Tell your HCP right away if you have any of these symptoms of a severe allergic reaction during or soon after an infusion of JEVTANA: rash or itching, skin redness, feeling dizzy or faint, breathing problems, chest or throat tightness, or swelling of face.

JEVTANA can cause severe stomach and intestine problems, which may lead to death. You may need to go to the hospital for treatment.

Vomiting and diarrhea can happen when you receive JEVTANA. Severe vomiting and diarrhea with JEVTANA can lead to loss of too much body fluid (dehydration), or too much of your body salts (electrolytes). Death has happened from having severe diarrhea and losing too much body fluid or body salts with JEVTANA. Your HCP will prescribe medicines to prevent or treat vomiting and diarrhea, as needed with JEVTANA.

Get ready for your infusion day

With your infusion day just around the corner, get organized. Talk to your healthcare provider about what you will need, and use this checklist to help stay organized.

BEFORE INFUSION DAY CHECKLIST

- Follow any instructions from your healthcare provider (for example, review provided materials, complete recommended tests)
- Get insurance questions answered and identify resources and support available to you by Sanofi CareASSIST or your provider’s office
- Schedule and confirm your JEVTANA infusion appointments
- Tell your healthcare provider about all the medicines you take, including prescription and over-the-counter medicines, vitamins, and herbal supplements. JEVTANA can interact with many other medicines. Do not take any new medicines without asking your healthcare provider first. Your healthcare provider will tell you if it is safe to take the new medicine with JEVTANA.
- Learn about your infusion center’s policies. Possible items to bring with you include:
  - Water
  - Entertainment or activities
  - Headphones
  - Snacks
- Confirm how you will get to and from your infusion appointments

IMPORTANT SAFETY INFORMATION

Do not receive JEVTANA if: your white blood cell (neutrophil count) is too low, you have had a severe allergic reaction to cabazitaxel or other medicines that contain polysorbate 80 (ask your HCP if you are not sure), you have severe liver problems or you are pregnant. JEVTANA can harm your unborn baby or possibly cause loss of pregnancy.

Please see additional Important Safety Information throughout, and full Prescribing Information/Patient Information, including Serious Side Effects.
What to expect on infusion day

- **JEVTANA** is an infusion medicine administered by a trained professional. JEVTA...
Stay on track after treatments

After your JEVTANA infusions, monitor how you feel and check with your healthcare provider about your response to therapy. There are tests that your healthcare provider can perform to assess how JEVTANA is working for you.

Monitor how you feel
If you experience any side effect during or after treatment, talk to your healthcare provider. Your family and caregivers can be an important source of support.

Check your blood-based markers
There are multiple blood-based tests that can help you and your healthcare provider assess your status. Your healthcare provider will likely perform a prostate-specific antigen (PSA) test every 3-4 weeks to help monitor your response to therapy.

Perform body imaging
Aside from blood-based tests, your healthcare provider may use body imaging tools to assess your advanced prostate cancer. It will allow your healthcare provider to get images from inside your body. Technologies that can be used include computed tomography (CT) scans, a magnetic resonance imaging (MRI) scan, or bone scans.

IMPORTANT SAFETY INFORMATION
Tell your HCP if: you have vomiting or diarrhea, or if your symptoms get worse or do not get better. JEVTANA can cause a leak in the stomach or intestine, intestinal blockage, infection, and bleeding in the stomach or intestine. This can lead to death. Tell your HCP if you get any of these symptoms: severe stomach-area (abdomen) pain, constipation, fever, blood in your stool, or changes in the color of your stool.

Kidney failure may happen with JEVTANA, because of severe infection, loss of too much body fluid (dehydration), and other reasons, which may lead to death. Your HCP will check you for this problem and treat you if needed.

Tell your HCP if you develop these signs or symptoms: swelling of your face or body, or decrease in the amount of urine that your body makes each day or blood in your urine.

Although a PSA test can be helpful, it will not provide you and your healthcare provider with a complete picture of your health status. It’s important to talk with your healthcare provider about other blood-based or body imaging tests that can be used to monitor your advanced prostate cancer and treatment response.
Healthy living tips for patients

When receiving regular treatment with JEVTANA, it may be helpful to follow some simple nutrition and lifestyle tips to stay on track.

Diet and nutrition can make a difference
A healthy diet can help you keep up your strength during treatment, prevent your body’s tissues from breaking down, help your body keep up its defenses against infections, and handle your treatments better. Every man’s dietary needs are different, especially during treatment for cancer. Your healthcare providers can help you figure out what your nutritional goals should be, and how you can meet them.

In general, a healthy diet includes fruits and vegetables, breads and grains, dairy, and protein. You should also drink plenty of fluids to avoid symptoms of dehydration like light-headedness, dry mouth, and nausea.

Exercise and staying active
Regular physical activity can help you increase your energy levels and reduce fatigue during treatment. It can also help reduce stress, nausea, and constipation.

If you are not already physically active, it is important to start out small and increase your activity level over time. Be as physically active as you can, when you can. Do not push yourself, and be sure to talk with your healthcare provider first about any new exercise routine you may want to try.

Just as activity can be important to your health, regular sleep can be important for your immune system. So make sure to get enough sleep. If you feel stressed or overwhelmed, try deep breathing, listening to soothing nature sounds or music, and don’t hesitate to ask for help from family and friends.

Tips for caregivers

Caregivers can be a spouse, family, or friends. As a caregiver, you can provide an important source of support. Here are some tips on the types of support you can provide.

Encourage your loved one to talk to his doctor about JEVTANA
Your loved one may be reluctant to explore another therapy. His previous therapies may have been challenging. He needs to know about any treatments the doctor may be recommending.

• Talk with him about all the risks and benefits of JEVTANA and if it may be right for him.
• Encourage your loved one to schedule an appointment with his healthcare team to ask if JEVTANA is right for him.
• Prepare for his doctor visit with this guide.
• Provide your loved one with information about JEVTANA by visiting JEVTANA.com.

Don’t forget to take care of yourself

• Focus on the positive impact your support is providing.
• Look after your own health by eating right, exercising, and making time for your own medical checkups.
• Reach out to other caregivers. They understand what you’re going through and may be able to offer support.
• Connect with friends. They may want to help, but don’t know how.
• Don’t carry the burden on your own. Schedule time off for yourself.

IMPORTANT SAFETY INFORMATION

Lung or breathing problems may happen with JEVTANA and may lead to death. Men who have lung disease before receiving JEVTANA may have a higher risk for developing lung or breathing problems with JEVTANA treatment. Your HCP will check you for this problem and treat you if needed.

Tell your HCP right away if you develop any new or worsening symptoms, including: trouble breathing, shortness of breath, chest pain, cough or fever.
**Indication**

**What is JEVTANA?**

JEVTANA is a prescription anti-cancer medicine used with the steroid medicine prednisone. JEVTANA is used to treat men with castration-resistant prostate cancer (prostate cancer that is resistant to medical or surgical treatments that lower testosterone) that has worsened (progressed) after treatment with other medicines, including docetaxel.

**Important Safety Information**

**What is the most important information I should know about JEVTANA?**

JEVTANA may cause serious side effects, including:

- Low white blood cells, which can cause you to get serious infections, and may lead to death. Men who are 65 years or older may be more likely to have these problems. Your healthcare provider (HCP):
  - will do blood tests regularly to check your white blood cell counts during your treatment with JEVTANA.
  - may lower your dose of JEVTANA, change how often you receive it, or stop JEVTANA until your HCP decides that you have enough white blood cells.
  - may prescribe a medicine for you called G-CSF, to help prevent complications if your white blood cell count is too low.

Tell your HCP right away if you have any of these symptoms of infection during treatment with JEVTANA: fever (take your temperature often during treatment with JEVTANA), cough, burning during urination, or muscle aches.

Also, tell your HCP if you have any diarrhea during the time that your white blood cell count is low. Your HCP may prescribe treatment for you as needed.

Severe allergic reactions can happen within a few minutes after your infusion of JEVTANA starts, especially during the first and second infusions. Your HCP should prescribe medicines before each infusion to help prevent severe allergic reactions.

Tell your HCP right away if you have any of these symptoms of a severe allergic reaction during or soon after an infusion of JEVTANA: rash or itching, skin redness, feeling dizzy or faint, breathing problems, chest or throat tightness, or swelling of face.

JEVTANA can cause severe stomach and intestine problems, which may lead to death. You may need to go to the hospital for treatment.

Vomiting and diarrhea can happen when you receive JEVTANA. Severe vomiting and diarrhea with JEVTANA can lead to loss of too much body fluid (dehydration), or too much of your body salts (electrolytes). Death has happened from having severe diarrhea and losing too much body fluid or body salts with JEVTANA. Your HCP will prescribe medicines to prevent or treat vomiting and diarrhea, as needed with JEVTANA.

Tell your HCP if: you have vomiting or diarrhea, or if your symptoms get worse or do not get better. JEVTANA can cause a leak in the stomach or intestine, intestinal blockage, infection, and bleeding in the stomach or intestine. This can lead to death. Tell your HCP if you get any of these symptoms: severe stomach-area (abdomen) pain, constipation, fever, blood in your stool, or changes in the color of your stool.

Kidney failure may happen with JEVTANA, because of severe infection, loss of too much body fluid (dehydration), and other reasons, which may lead to death. Your HCP will check you for this problem and treat you if needed.

Tell your HCP if you develop these signs or symptoms: swelling of your face or body, or decrease in the amount of urine that your body makes each day or blood in your urine.

Lung or breathing problems may happen with JEVTANA and may lead to death. Men who have lung disease before receiving JEVTANA may have a higher risk for developing lung or breathing problems with JEVTANA treatment. Your HCP will check you for this problem and treat you if needed.

Tell your HCP right away if you develop any new or worsening symptoms, including: trouble breathing, shortness of breath, chest pain, cough or fever.

**Who should not receive JEVTANA?**

Do not receive JEVTANA if: your white blood cell (neutrophil count) is too low, you have had a severe allergic reaction to cabazitaxel or other medicines that contain polysorbate 80 (ask your HCP if you are not sure), you have severe liver problems or you are pregnant. JEVTANA can harm your unborn baby or possibly cause loss of pregnancy.

**What should I tell my HCP before receiving JEVTANA?**

Before receiving JEVTANA, tell your HCP if you:

- had allergic reactions in the past
- are age 65 or older
- have kidney or liver problems
- have lung problems
- are a male with a female partner who is able to become pregnant. Males should use effective birth control (contraception) during treatment with JEVTANA and for 3 months after your final dose of JEVTANA.

JEVTANA may cause fertility problems in males. This may affect your ability to father a child. Talk to your HCP if you have concerns about fertility.

Please see additional Important Safety Information throughout, and full Prescribing Information/Patient Information, including Serious Side Effects.
**Important Safety Information ** continued

Tell your HCP about all the medicines you take, including prescription and over-the-counter medicines, vitamins, and herbal supplements. JEVTANA can interact with many other medicines. Do not take any new medicines without asking your HCP first. Your HCP will tell you if it is safe to take the new medicine with JEVTANA.

What are the possible side effects of JEVTANA?

Common side effects of JEVTANA include:

- low red blood cell count (anemia), which is common with JEVTANA, but can sometimes also be serious. Your HCP will regularly check your red blood cell count. Symptoms of anemia include shortness of breath and tiredness.
- low blood platelet count, which is common with JEVTANA, but can sometimes also be serious. Tell your HCP if you have any unusual bruising or bleeding.
- inflammation of the bladder, which has happened in men who have previously received pelvic radiation therapy. Tell your HCP if you have blood in your urine, burning sensation during urination, or frequent or urgent need to urinate.
- fever
- diarrhea
- tiredness
- nausea
- vomiting
- constipation
- weakness
- stomach pain
- back pain
- numbness, tingling, burning or decreased sensation in your hands or feet
- change in your sense of taste
- cough
- joint pain
- hair loss
- decreased appetite

Tell your HCP if you have any side effect that bothers you or that does not go away. These are not all the possible side effects of JEVTANA. For more information, ask your HCP or pharmacist.

Call your doctor for medical advice about side effects. You may report side effects to FDA at 1-800-FDA-1088.
